

PORK // DOUBLE BLADE CIRCULAR SAW

INCREASED PRODUCTIVITY

The double blade circular saw simultaneously separates the hock and the front foot from the shoulder by using two circular blades. The process is done in one single operation, thus improving productivity and reducing space requirements.

It only requires one operator to align the shoulder with the laser guide marking, after which a hold down conveyor will hold the shoulder in place during the cut to provide more accuracy.

Working process

1. Operator aligns the cuts by means of two laser guide lights
2. Foot and hock are cut and sent to separate lines

Hygiene

The double blade circular saw is approved for the food processing industry.

Value for you!

- Uses half the space of two single blade saws
- Two operations in half the time of two single blade saw
- Hinged base allows fast and easy blade replacement
- Safe use for operator
- No manual sorting after separation
- Consistent hock size
- Less mechanical components
- Consistent product
- Adjustable configuration of saw
